## Washington Group on Disability Statistics

01 September 2025

### Disability in Brazil

#### The Importance of Disability

Disability is both a multidimensional concept and experience. Disability can affect anyone at any time – from birth through childhood, adolescence, adulthood, and old age. Worldwide, many people with disabilities do not have equal access to education, employment, and health care. In addition, those with disability may experience barriers to participating in civic and social life activities.

#### Defining Disability

No single definition of disability exists. Definitions vary depending on the purpose for measurement. Moreover, the nature and severity of disabilities can vary greatly depending on

that individual's contextual (personal and environmental) circumstances. Thus, the degree to which participation in life activities is restricted depends on the interaction between the individual's functioning (ability to perform basic functional activities) and the environment.

#### The Washington Group

The Washington Group on Disability Statistics (WG), a city group established under the United Nations Statistical Commission, was formed to address the need for population-based measures of disability by promoting and coordinating international co-operation in the area of health statistics, focusing on disability data collection tools suitable for censuses and national surveys.
